# CULTURED CARNATION CUTTINGS FOR PROPAGATING STOCK

We are equipped to supply rooted cuttings that have been individually cultured and shown to be positively free from Bacterial and Fusarium Wilts. In this procedure a small section of the stem of each cutting is placed in a growing medium and incubated for one week. The presence of any systemic disease organisms can be positively detected.

To establish "Mother Block" propagating stock we recommend planting only cultured cuttings. The cost is 20c each above the list price—minimum of 25 cuttings of one variety. Delivery can be made approximately 30 days after receipt of order.
